Title	SET & External Stock Market Indexes
Frequency ,Lag time and Release schedule	Frequency Daily Lag time 1 business day Release schedule Every business day at 9.30 a.m.
Summary Methodology • Analytical Framework, Concepts, Definitions, and Classifications • Scope of the data • Accounting Conventions • Nature of the Basic Data Sources • Compilation Practices	<p>SET & External Stock Market Indexes :</p> <p>SET Index is a composite index calculated from the prices of all common stocks (including unit trusts of property funds) on the main trading board, except for those stocks that have been suspended for more than 1 year.</p> <p>The SET Index is a market capitalization-weighted price index, which compares the current market value of all listed common shares with its value on the base date (April 30, 1975), which was the day when the SET Index was first established and the original index was set at 100 points.</p> $\text{SET Index} = \frac{\text{Current market Value} \times 100}{\text{Base Market Value}}$ <p>The SET Index calculation is constantly adjusted to fully reflect changes in the values and number of stocks resulting from various events, e.g., public offerings, exercised warrants, conversions of preferred to common shares, in order to eliminate all effects other than price movements from the index.</p> <p>External Stock Market Indexes consist of items as follows :</p> <ol style="list-style-type: none"> 1. Dow Jones (New York) 2. Nasdaq (New York) 3. Financial Times (London) 4. Nikkei (Japan) 5. Hang Seng (Hong Kong) 6. Straits Times (Singapore) 7. KLSE Composite (Malaysia) 8. JSX Composite (Indonesia) 9. PSE Composite (Philippines) 10. KSE Composite (South Korea) 11. ALL Ordinaries (Australia)
